INNOVATION & TECHNOLOGY

JALTEST TOOLS

New Jaltest Tools product range, designed to provide the workshop with professional and reliable equipment, in accordance with the current technology present in commercial vehicles. In combination with Jaltest diagnostics device, it offers new business opportunities and an easy and guaranteed service for the final customer.

ELECTRONIC SIMULATION BENCHES

The Jaltest ESB simulation equipment makes it possible to carry out the diagnosis, repair and test of Electronic Control Units for commercial vehicles through:

- Simulation of the ECU input signals.
- Reading of the output signals.
- Access to repair documents.
- Access to testing guides.

ADAS CALIBRATION EQUIPMENT

Equipment and accessories required for the calibration of ADAS systems that manage the radar for the adaptive cruise control and object detection, and the camera to detect when the vehicle is deviating out of the lane.

SPECIAL REPAIR TOOLS

Specific tooling required for maintenance and repair operations in essential components of the vehicle, such as transmission or engine.

ELECTRONIC EQUIPMENT

Tools frequently used in workshops, selected to obtain a complete diagnosis:

- Maintenance stations of HVAC.
- Gas analysers.
- Light regulators.
- Technical inspection cameras.
- Tachometers.
- Battery chargers and starters.
